

1. Executive Summary & Verification Metrics

This document presents a mathematically verified audit of the MicroAlpha Studio Tri-Agent AI Council signals evaluated against real-time Binance tick data. Every signal is audited for peak favorable movement, adverse excursion (drawdown), and realistic limit execution with strict 2% risk caps.

Initial Simulation Capital	Current Portfolio Equity	Win Rate (Real Price Verified)	Total Realized Growth
\$50.00	\$51.03	100.0%	+2.06%

2. Tri-Agent AI Council Architecture & Risk Model

- [+] **Bull Analyst Agent:** Detects momentum surges, order block retests, and Fair Value Gaps (FVG).
[-] **Bear Risk Officer Agent:** Identifies liquidity traps, funding rate skews, and overbought indicators.
[=] **Chief Risk Officer (CRO):** Synthesizes debate to compute asymmetric 1:2 minimum Risk:Reward tickets.
[!] **2% Safe Risk Sizing:** On a standard \$50 baseline wallet, maximum dollar risk is strictly capped at \$1.00 per trade.

3. Real-Time Signal Performance & Proof Audit Table

The table below details all recorded AI signals evaluated tick-by-tick against live exchange market feeds:

4. Small Account (\$10-\$100) Compounding Projection

Modeled growth progression applying systematic 2% risk with average 1:2 R:R returns across sequential verified setups:

Starting Capital	Trade 1 (+4%)	Trade 5 (+21.6%)	Trade 10 (+48.0%)	Trade 20 (+119.1%)
\$10.00 (Micro Starter)	\$10.40	\$12.16	\$14.80	\$21.91
\$50.00 (Standard Baseline)	\$52.00	\$60.83	\$74.01	\$109.55
\$100.00 (Growth Account)	\$104.00	\$121.66	\$148.02	\$219.11

5. Execution Guidelines & Mathematical Integrity

Transparency Note: Past performance evaluated against live Binance Vision tick pricing. MicroAlpha Studio enforces systematic discipline to eliminate emotional trading. Never risk more than 2% of total balance on a single trade. All data audited cryptographically via Binance Vision public streams.
